kenny.talbi@outlook.fr

Senior Platform Engineer with a full-stack background, grown into platform naturally after years in product engineering. I focus on the tooling, pipelines, and systems that make engineering teams move faster and more confidently, and my product background keeps me grounded in what developers actually need day to day.

Work Experience

Senior Platform Engineer

Platform Guild

Powerus

Berlin, Germany

Nov 2024 – Present

- Replaced 5 static staging environments with **unlimited on-demand previews** via ArgoCD ApplicationSets, provisioned in minutes from a GitHub label, used across engineering, design, and product.
- Drove the **zero-downtime** migration from DigitalOcean to AWS, resolving service reliability issues, introducing granular access control, and unlocking a broader cloud services catalog.
- Migrated from Docker Compose to Kubernetes on EKS, replacing fragmented per-service operations with a unified platform for deployments, recovery, configuration management, and engineer self-service via ArgoCD.
- Revamped CI/CD pipelines with GitHub Actions and self-hosted ARC runners, cutting P95 from **20 to 10 minutes** and reducing CI costs by **40%**.
- Rolled out continuous deployment with Argo Rollouts blue/green, increasing deployment frequency from **1–2/day to 20–25/day** and reducing release risk.
- Hardened the security posture implementing zero-trust access with Cloudflare (Access, WARP), private-only infrastructure, and VPC-based operational access for critical systems.
- Built internal platform packages: service worker update mechanism, NestJS decorators for queue and log ownership, and a webhook fan-out dispatcher for preview environments.
- Launched a platform guild, hands-on workshops (AWS, Terraform, Kubernetes), and regular office hours to spread platform knowledge and build team autonomy across product squads.

Senior Full-Stack Engineer

Marketplace Squad · DevOps Guild Lead

Powerus

Berlin, Germany

May 2023 – Nov 2024

- Led improvements to the job matching system, reducing average execution time by **68%** and enhancing content delivery and personalization.
- Migrated DigitalOcean infrastructure from ClickOps to Terraform IaC, consolidating into the monorepo for full visibility, reducing environment provisioning to a single config change.
- Migrated frontends to Angular 17 with esbuild, set up Storybook with visual testing, cutting CI build times by **50%** and reducing visual regression feedback loops.
- Set up Datadog across the stack: agent deployment on all VMs, CI/CD observability, dashboards and monitors to support on-call rotation.
- Supported the data team with BigQuery permissions and tooling integration across their pipeline (DBT, Fivetran, BigQuery, CI/CD).
- Mentored and onboarded junior engineers on best practices, architecture, and product domain knowledge, enabling them to ship features independently and confidently.

Full-Stack Engineer

Network Squad · DevOps Guild

Powerus

Berlin, Germany

Oct 2022 – May 2023

- Improved CI/CD pipelines from **50 mins to 20 mins**, reduced E2E test flakiness, and automated mobile builds with GitHub Actions and Fastlane.
- Shipped the iOS mobile app using CapacitorJS with live update support. Mobile users showed **30%** higher activity than web users.
- Migrated our configuration management from build time to runtime reducing the numbers of build in our CI from N (number of environments) to 1 and enabling more testing environments without impacting delivery performance.
- Upgraded core frameworks (NX, NestJS, Angular) to improve developer experience, runtime and build performance.
- Built community features (video uploads, reporting system) and integrated education modules to improve user retention.

Junior Full-Stack Engineer

Acquisition Squad

Powerus

Berlin, Germany

Jul 2022 - Oct 2022

- Contributed to user acquisition by building sign-up funnels, landing pages, and public job search features, and integrated Google Ads to align marketing with product.

Junior Full-Stack Engineer

R-D department

Apollo Coding Life

Lyon, France

Sep 2021 - Jun 2022

- Full-stack development across healthcare, energy, and enterprise projects (React, Angular, .NET 6, Azure), building internal tools with role-based access and Microsoft Graph API integration.

Technologies and Languages

- **Languages & Scripting:** Typescript, Go, C#, Python, Bash, Jsonnet, Yaml
- **Cloud & Infrastructure:** AWS, Kubernetes, Terraform, Docker, ArgoCD, Helm, Karpenter, Linux, Cloudflare, Vault, Traefik, Caddy, Nginx, DigitalOcean, Hetzner
- **Observability & Reliability:** Datadog, Grafana, VictoriaMetrics, Loki, Sentry
- **Backend & Frontend:** NestJS, Angular, React, .NET, MongoDB, Postgres, RabbitMQ, Redis, NX monorepo
- **CI/CD & Testing:** GitHub Actions, Drone CI, Jest, Playwright, Cypress, Storybook
- **Spoken languages:** French (native), English (fluent)

Projects

Nexus

Jun 2025 - Present

Nexus is my personal internal developer platform, where I design and validate platform engineering concepts by running real applications in a production-like environment. ([code source](#))

- Built a GitOps-driven IDP with Terraform and ArgoCD, covering deployments, CI/CD pipelines, N8N, and Grafana-based observability stack (metrics, logging, tracing).
- Developed applications on the platform in Go and React, including a custom Cloudflare ingress controller and a portfolio site with an embedded VS Code-style code explorer.

Kiln

Apr 2026 - Present

Open-source IaC PR-based management UI. GitHub OAuth login, repo and PR browsing, push-based plan/apply execution with PR comments for traceability, and real-time log streaming via SSE. Written with Go, React and Postgres. ([code source](#))

Education and Certifications

- **M.Sc. General Engineering**, ECAM, Lyon.

2017–2022
